OBJECTIVES

At the conclusion of this activity, participants should be able to:

- Employ screening and treatment strategies for Metabolic Bone Disease
- Differentiate screening and treatment of endocrine disorders in woman
- Utilize current state-of-the-art techniques for assessment, imaging and diagnosis of thyroid nodules and the management of thyroid disorders
- Explain the spectrum of general endocrinological disorders and address the complex needs of endocrine patients
- Describe options for medical management to achieve glycemic control
- Review screening and treatment mechanisms for Type 2 Diabetes and Thyroid Diseases
- Identify how the outcomes from diabetes and cardiovascular studies impact treatment options for patients; both in the hospital and the outpatient environment
- Explain the challenges for identification and treatment of unusual cases in diabetes
